BIOSCIENCE APPLICATIONS

POWERFUL DX 500 CHROMATOGRAPHY SYSTEMS ADVANCE BIOSEPARATIONS

PEAKNET: THE PERFECT SOFTWARE MATCH FOR THE DX 500

HPLC FOR THE LIFE SCIENCES: Dionex introduced the new DX 500 Chromatography Systems in September 1993. This new HPLC system has a space-saving design that expands the range of chromatographic capabilities for all biotechnology applications.

MULTIPLE CAPABILITIES: Compact DX 500 systems contain advanced modular components, including new gradient and isocratic pumps, UV/Visible absorbance, electrochemical, and conductivity detectors, enclosures for housing injection valves, columns, and other ancillary equipment, and simple display and safety features for unparalleled performance.

PEAKNET: The PeakNet Chromatography Workstation completely automates DX 500 control, data acquisition, calibration, configuration, scheduling, analysis, and reporting.

PeakNet incorporates a unique approach to system communication with its implementation of high-speed, bi-directional communications based on the IEEE 802.3 standard.

Business Telecom Report

A Publication of TouchWave

Firms Slash Costs, Boost Productivity With WebSwitch™ Phone System

New Phone System Uses Internet Protocol to Turn Inside Calls into "Free" Calls

...to the WebSwitch using their own data connection. By "piggybacking" over their data line, such as DSL, calls to and from telecommuters are "free." The system also makes telecommuters more accessible to customers, coworkers and each other. This calls come in through their usual office extension, and they continue, inside and across state lines as if they were in the office.

Save on Service and Maintenance

Conventional phone systems are costly to maintain. Change requires specially trained personnel or outside specialists. Systems often include add-on service fees of \$12 a year. Moreover, anyone who can touch a telephone network port can tamper with WebSwitch phone systems.

TouchWave's WebSwitch is not only 100% secure, but it also includes built-in firewalls and intrusion detection to make sure that unauthorized users are not eavesdropping on the network.
